

7.1.3:

Solid waste management

The College is committed to natural resource resources and their proper use. Trees are cultivated on 60% of the land of the college, so that clean air and healthy environment can be experienced in the college campus. The entire campus is reserved as plastic free.

The use of plastic is banned in the area. At the same time, in order to preserve the environment, automatic vehicle inheritance is prohibited in the college premises.

The college has a special system for solid waste management. Through which solid waste is converted into useful fertilizer which is then used for newly planted fruit trees in the area. As 60% of the area is under tree planting, the amount of bio-waste is high which makes the process of waste decomposition naturally fast and waste can be managed.

Dustbins Are Placed In The Premises.
